CHRONA BUSINESS

Product Overview & Vision

An all-in-one workforce productivity platform
for businesses and institutions to manage, organise, and optimise their day-to-day operations.

Executive summary

Chrona Business is a complete operations and productivity platform that acts as a personal assistant for entire organisations. It replaces the patchwork of calendars, task managers, HR tools, and spreadsheets that most businesses use today with one unified system that adapts to how each role in a company actually works.

The platform is designed to serve everyone from a self-employed consultant managing their own day to a corporation coordinating departments, teams, and hundreds of employees. It combines task and workflow management, real-time progress tracking, intelligent scheduling, document and contract management, and role-based dashboards into a single experience.

THE CORE IDEA

One platform where leaders see everything, managers see what they need to lead, and employees see what they need to execute — all updated in real time, all in one place.

The problem we are solving

Modern businesses run on too many disconnected tools. A typical small business or growing company juggles:

- A calendar app for meetings
- A task manager for to-dos
- A messaging tool for communication
- Spreadsheets for tracking employee progress
- Separate folders or HR systems for contracts and training
- And no real way to see what is happening across the company in real time

This costs time, creates blind spots for leadership, frustrates employees, and makes it nearly impossible to optimise how a team actually spends its day. Chrona Business consolidates all of this into one platform that is aware of the company's structure, the role of every user, and what is happening right now.

What Chrona Business is

Chrona Business is a multi-tier workforce platform with four core capabilities:

1. Organisation & people management

Set up your business, define your departments and teams, add employees, upload contracts and training materials, and assign everyone the right level of access — all in a guided setup.

2. Task & workflow management

Create, assign, approve, and track tasks across the entire company. The system suggests who should do what, flags incoming work, and shows real-time progress at every level.

3. Smart scheduling & calendar

A unified calendar that connects to existing tools, shows daily, weekly, and monthly views, and automatically surfaces available time windows for booking meetings, training, or focused work.

4. Live activity & dashboards

Each role sees a dashboard tailored to what they need: company-wide for leaders, department-wide for managers, team-level for team leads, and personal for employees. Live status indicators show who is available, who is in a meeting, and who is heads-down on tasks.

Who it is for

Chrona Business is built to serve two main account categories, with sub-types in each:

Account category	Sub-types	Examples
Businesses	Self-employed, Partnership, Corporation	Consultants, agencies, restaurants, automotive, and retail
Institutions	Schools, Universities, Medical institutions	Private schools, colleges, clinics, hospitals

Correction: Will avoid institutions for now, will create the website for only business

During signup, the system asks each business about its structure — number of employees, number of departments, type of ownership — and configures itself accordingly. A self-employed user gets a

organisationoptimisationorganisationthe optimisationOrganisation,

streamlined single-user experience; a 200-person company gets the full organisational hierarchy with departments, teams, and approval workflows.

How it works: the setup journey

Getting started is intentionally simple. A new business owner goes through a guided flow that takes about 10 minutes:

Step 1 — Sign up for your business.

Provide basic business information: name, founding date, type of business, industry, services offered, and the size of the team.

Step 2 — Create your own account

Set up your personal profile (name, contact details, role inside the business). The first account created becomes the primary owner account. Put a check box, are you the owner of the business??

Step 3 — Verify your business (optional below 15 employees)

Upload business documents to verify the company. Verified businesses unlock additional customisation: company logo, custom colour palette, and a branded loading screen — so the product feels like an extension of the company, not a generic tool.

Correction: Will avoid step three for the first version

Step 4 — Add your employees

Enter employee details, upload contracts (optional) and onboarding documents, and assign them to teams or departments. The system generates an invitation link that will be sent to the employee's email, which the employee will go through to complete their own signup. Option to add the employee with a contract time constraint (full-time or for 3 months contract or 6 months, which the manager can increase or decrease later in the system)

Step 5 — Connect calendars and start tracking

Connect existing calendar tools (Google, Outlook), and the dashboard begins showing real-time progress, scheduling recommendations, and activity across the company.

PARTNERSHIP BUSINESSES

When a business is set up as a partnership, all partners get full access by default. Account owners can choose during setup whether to require partner approval for major changes — protecting against unilateral decisions in shared businesses.

How access and roles work

Not everyone in a company should see everything. Chrona Business uses a five-tier access model that mirrors how real organisations are structured. Each tier sees a dashboard and toolset tailored to their responsibilities.

Role	Who it's for	What they can do
Employer	Owner, founder, partner	Full access. Manage everything: business, departments, teams, employees, tasks, documents.
C-Suite	CEO, CTO, COO and similar	Full visibility across the company. Manage departments, teams, and tasks below them.
Manager	VPs, Operations Managers, middle management	Access to their department's stats. Modify teams and members, manage tasks and documents for their area.
Team Lead	Team managers, team leads	Access to their team's stats. Manage members and tasks within their team.
Employee	General workforce	Personal view: their tasks, their schedule, their documents, their progress.

Permissions cascade naturally: a Manager can act on the teams below them but cannot change the company's structure without approval. A Team Lead can run their team without needing the CEO's input on day-to-day decisions. This keeps things efficient while protecting the integrity of the organization.

The dashboard experience

The dashboard is where users spend most of their time. It is built to give each person exactly the right level of information — not too much, not too little — at a glance.

Four dashboard tiers

Each role gets a dashboard sized to their scope:

- **Primary (Employers):** Company-wide progress, performance across all departments and teams, recommendations for top performers, alerts on overworked employees, and schedule optimization suggestions for the whole organization.
- **Secondary (Managers & C-Suite):** Department-wide and team-wide progress, personal stats, and recommendations specific to the areas they oversee.
- **Tertiary (Team Leads):** Their own team's progress, personal performance, and live activity of their team members.
- **Viewer (Employees):** Personal tasks, today's schedule, upcoming work, priority levels, and improvement opportunities.

What the dashboard shows

- A company-wide progress bar showing the percentage of active tasks completed
- Three progress rings showing completion at the team, department, and C-suite levels
- Recognition recommendations highlighting the most efficient employees who deserve a shout-out
- Alerts for the most overworked employees, so leaders can rebalance workloads before burnout
- Schedule optimization suggestions powered by activity patterns
- A real-time activity tracker showing who is currently working on what

The collapsible sidebars

The interface is built around two sidebars that can be expanded or collapsed depending on what the user needs to focus on:

- **Sidebar A (left):** Navigation. Company logo, Tasks, Calendar, Organization, Settings, Profile, Log out.

organisationoptimisationorganisationthe optimisationOrganisation,

- **Sidebar B (right):** Live information. Activity status, personal tasks for the day, suggested tasks, work currently in progress, and active employees right now.

Real-time activity status

Every user has a live activity status that the rest of the company can see at a glance — colour-coded for fast recognition. This replaces the awkward 'is this person free right now' guesswork with a clear, always-visible answer.

Status	Meaning
Available (green)	Free for new tasks, meetings, or quick questions
Tasking (yellow)	Actively working on an assigned task
Meeting (orange)	In a scheduled meeting
Lunch / Break (blue)	On a break
Personal Time (red)	Off the clock or personal time
Training (grey)	In training or learning mode

When an employee logs in, the status defaults to Available. They can change it manually as their day flows. Future versions will detect status automatically based on calendar events and active tasks.

Task management

Tasks are the heart of Chrona Business. The system distinguishes between two views — one for people who assign and approve work, and one for people who execute it.

For leaders, managers, and team leads

A multi-function task view that lets them:

- See priority tasks with name, turnaround time, and a colour-coded status based on urgency
- View today's task calendar as a horizontal time-block strip — meetings, work blocks, breaks, and lunch all at a glance
- Approve or deny incoming task requests from those below them
- See available time windows across their team for scheduling
- Assign tasks either by accepting smart recommendations or manually picking the right person
- Track recent activity: completed tasks, hours worked, completed meetings

For employees

A streamlined view focused on getting work done:

- Today's tasks with time blocks and current progress
- Visual indicators showing which task is in progress, which is up next, and which is the highest priority for the day
- Personal calendar showing the week and month at a glance
- A clear view of upcoming work and improvement opportunities

SMART RECOMMENDATIONS

When new tasks come in, the system suggests the best person to assign them to based on workload, skills, and availability — but the human always makes the final call.

organisationoptimisationorganisationthe optimisationOrganisation,

The calendar

The calendar is more than a meeting tracker — it is the visual layer over the entire workday. Users can switch between three views:

Today's view

A horizontal time-block strip showing the full day: meetings, tasks, breaks, lunch, and focus time. Each block is colour-coded by activity type, with a live indicator of where the user currently is in their day.

Weekly view

Five to seven-day columns showing every block, every status, every meeting. Days off are clearly marked. Patterns become visible: when is the team most productive? When are meetings clustering?

Monthly view

A full calendar grid with colour indicators on each day showing the mix of activities scheduled. Days with heavy meetings stand out from days with focus time.

Correction: once the user click the calender they will see todays view and current progression. Under that will be the monthly and weekly view tab

Available windows

One of the most useful features. Instead of asking employees, 'When are you free?', the system computes and shows it automatically:

'1st June, Monday — 2 hours 30 mins available'

'3rd June, Wednesday — 1 hour available'

'5th June, Friday — 3 hours available'

Each window is a clickable link that opens the booking flow directly. Scheduling becomes a single click instead of an email chain.

organisationoptimisationorganisationthe optimisationOrganisation,

The multi-function action button

A small but powerful design element: a single button on the top-right of every page that opens up to reveal the most-used actions. It is designed to keep the interface clean while keeping power features one click away.

By default, three actions are pre-configured:

- Create, approve, or deny a task
- Talk to the AI assistant
- Generate a report

Users can customise this up to a total of six actions in settings, tailoring the most common workflows to their own role and team.

Documents and records

Every business runs on paperwork. Chrona Business handles it natively, so contracts, training materials, and HR records are not scattered across folders and email threads.

- Employee contracts — uploaded once, accessible by the right people only
- Training materials — videos and PDFs, organised by team and role (not for version 1, later on we will implement this)
- Tax documents — secure storage with role-based access
- Employee warnings and notices — formal records with audit trail

Access to documents follows the same role-based logic as the rest of the platform. An employee can view and download their own contract; a manager can issue a warning visible only to that employee and the chain above them; HR-style documents stay where they belong.

Why Chrona Business wins

It replaces five tools with one.

Calendar, task manager, HR tracker, document storage, and team dashboard — all consolidated. Less subscription cost, less context switching, less duplicate data.

It adapts to the business, not the other way around

A self-employed consultant gets a clean, simple experience. A 200-person company gets full hierarchy, approvals, and departmental dashboards. Same product, different shape.

It gives leaders real-time visibility.

No more weekly status meetings just to find out what is going on. Progress, activity, and bottlenecks are visible the moment they happen.

It respects how people actually work.

Employees see only what they need. Managers see only what they manage. Leaders see everything. Information overload — and information silos — both go away.

It is built for branding.

Verified businesses get their own logo, colour palette, and loading screen — so the product feels like the company's own internal tool, not a third-party SaaS.

In one sentence

CHRONA BUSINESS

An all-in-one workforce platform that gives every role in a company exactly the tools, visibility, and access they need — and nothing more — so that businesses run more efficiently, leaders see more clearly, and employees do their best work.
